INTRODUCTION

Inverted Investment is a decentralized organization that has established its roots on a sturdy foundation of INFI holders. The organization is introducing 13 pioneering projects in the fields of cryptocurrency, metaverse, and digital payment systems. Among these projects, INFI CDEX is the primary focus - a cutting-edge digital trading platform that seamlessly integrates all 13 initiatives.

PROBLEM

The Cryptocurrency industry has seen significant challenges for both centralized (CEX) and decentralized (DEX) organizations, such as scams, high fees, volatility, and a lack of transparency. These concerns are detrimental to users in the industry. Know Your Customer (KYC) requirements and audits are fundamental during project launches, but they may not always prevent fraudulent behavior and can lead to a slow and cumbersome financial process for traders. Even CEX organizations, which are supposed to provide a secure and transparent trading environment, can own crucial financial data from users, such as digital wallet keys. Moreover, current blockchains have major shortcomings in terms of security and transparency that require addressing. In conclusion, the existing state of affairs is insufficient to construct a cost-effective, secure, and reliable digital payment system.

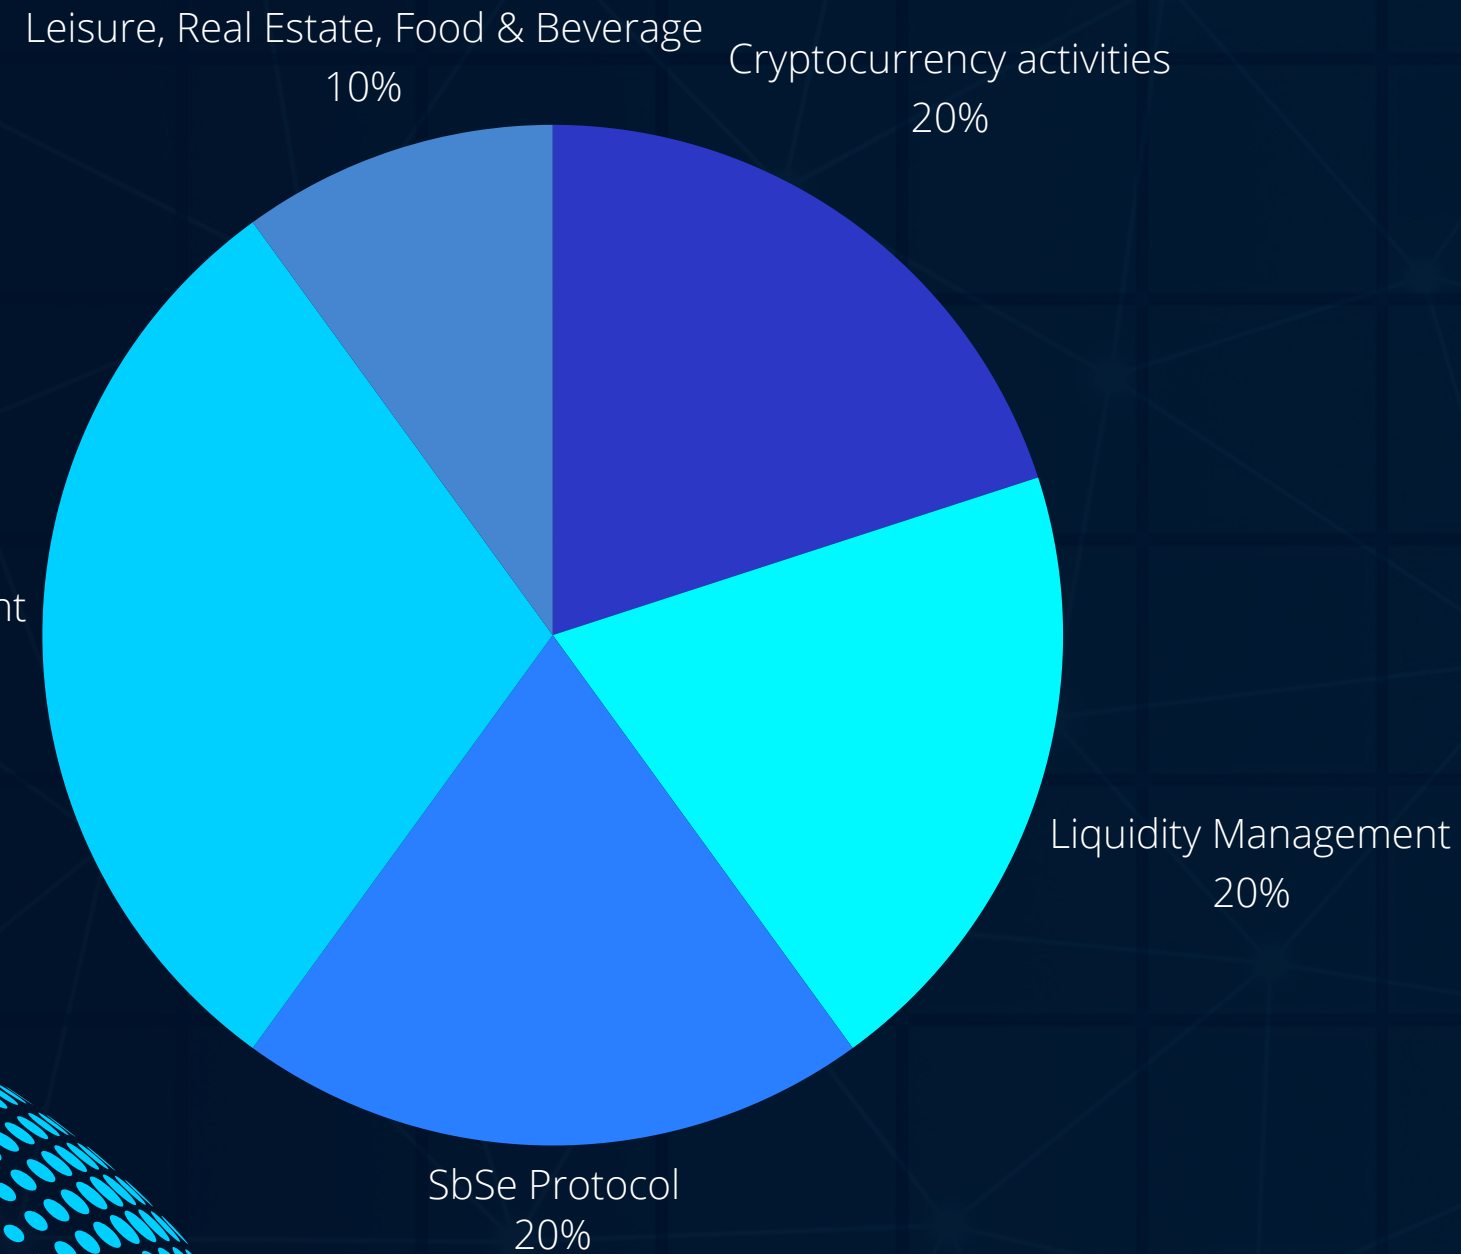

TARGET MARKET & OBJECTIVES

OBJECTIVES FOR A NEW DIGITAL PAYMENT SYSTEM

The digital trading platform targets individuals and organizations involved in cryptocurrency activities, the metaverse, real estate, leisure, and the food and beverage industry. Our aim is to provide an accessible and user-friendly digital payment platform, catering specifically to those unfamiliar with digital payments.

SOLUTION

INFI CDEX is a digital trading platform that connects multiple blockchains and is governed by the exclusive ©SbSe Protocol. Our own coin is INFI, which is the basis of the entire ecosystem. We also offer a unique opportunity for other projects to list for free. This allows them to generate passive income for their community through the ©SbSe Protocol without any obligations.

We've developed a unique **Liquidity Management system** that offers a 48-hour compensation scheme in case of any issues. Additionally, we work closely with trusted digital cybersecurity firms to ensure that our platform is secure. It's important to note that as a WEB3 decentralized platform, we do not store any digital wallet keys, which is a top priority for our customers' protection.

Our innovative **©SbSe Protocol** is the backbone of the entire INFI ecosystem. This protocol enables traders to earn a fixed passive income without any obligations, and main coin holders (24 months staking period only) can receive a 60% share of Inverted Investment profits. The profits are paid monthly to their account, with 50% in USDT and 10% in Bitcoin.

THE INFI CDEX

THE FUTURE TRADING PLATFORM

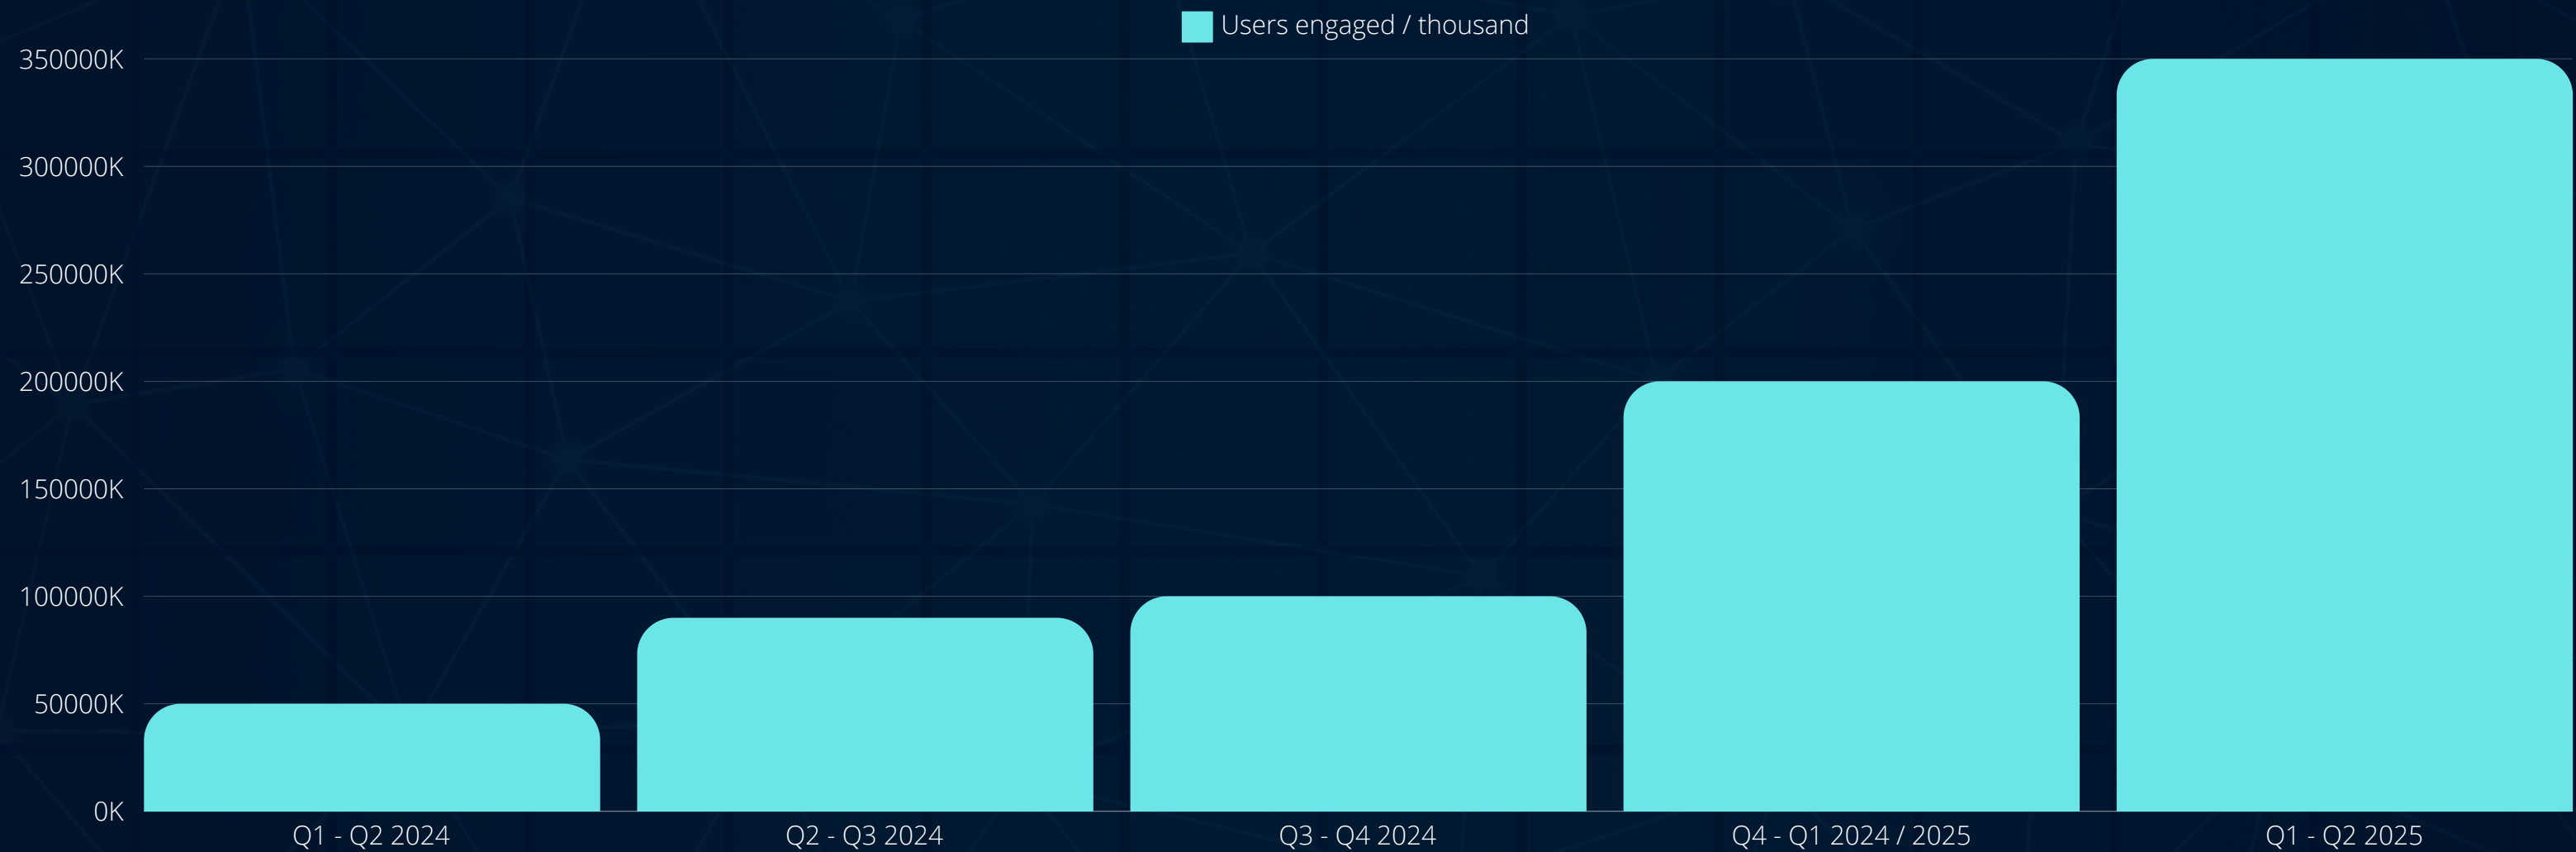

INFI CDEX the decentralized, multi-chain trading platform that prioritizes stability and transparency. The platform is powered by the innovative @SbSe Protocol, which enables users to earn a monthly passive income.
